

1

2

Life is not a simple thing – it is far more
than just a combination of chemicals

3

The total length of DNA in the
human body is approximately
113,636,363,636 miles long,
which would stretch
approximately 610.9 times to
the sun and back.

4

The DNA information found in the nucleus of a one-celled amoeba is equivalent to more than 30 volumes of the *Encyclopedia Britannica* & the DNA information in the entire amoeba is equal to 1000 complete sets of *Encyclopedia Britannica*.

5

Richard Dawkins in his *The Blind Watchmaker*:

“Biology is the study of complicated things that give the appearance of having been designed for a purpose.”

6

“... biologists must constantly keep in mind that what they see was not designed, but rather evolved.” Francis Crick

7

“The complexity of the simplest known type of cell is so great that it is impossible to accept that such an object could have been thrown together suddenly by some kind of freakish, vastly improbable event. Such an occurrence would be indistinguishable from a miracle.”

Michael Denton, microbiologist & atheist

8

Richard Lewontin
Darwinist, Harvard University

“Our willingness to accept scientific claims that are against common sense is the key to an understanding of the real struggle between science and the supernatural. We take the side of science in spite of the patent absurdity of some of its constructs, ... because we have a prior commitment to materialism.”

9

“Darwinian biologists must keep repeating that reminder to themselves because otherwise they might become conscious of the reality that is staring them in the face and trying to get their attention.”

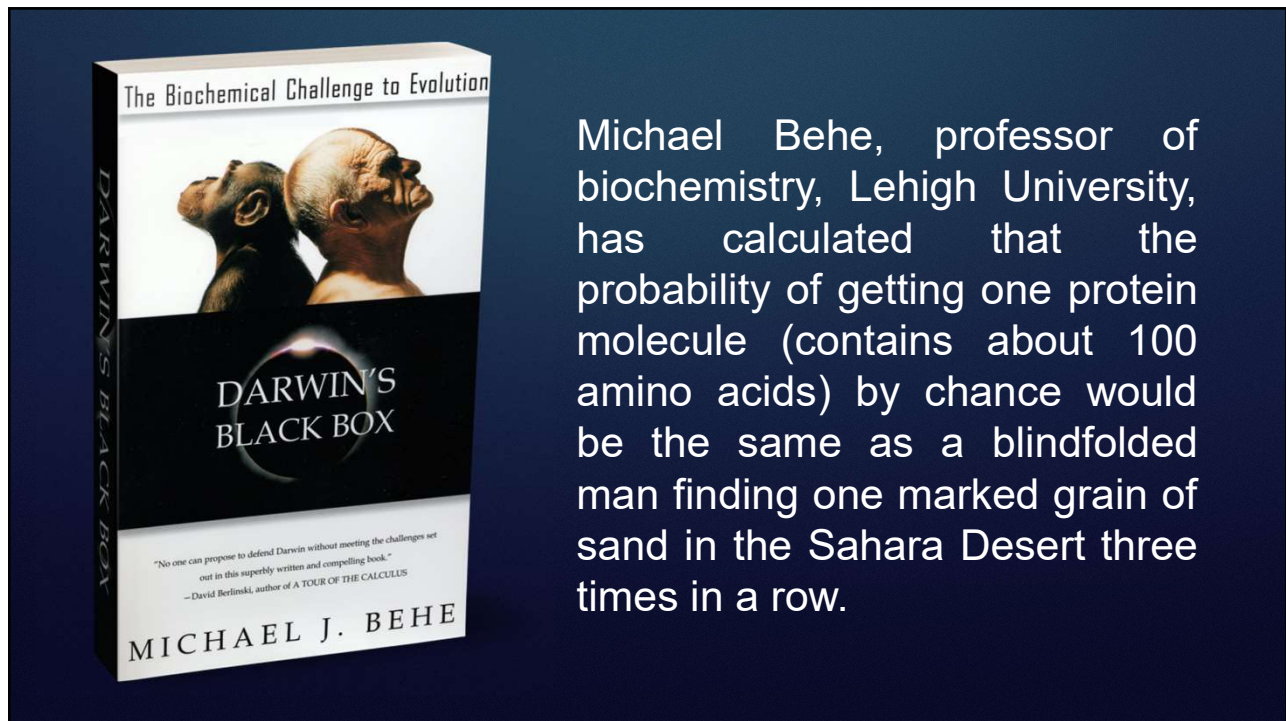

Phillip Johnson, Co-founder of the intelligent design movement

10

11

12

13

1. One reason why can't evolution happen

Genetic limits

14

15

2. There is a huge difference between
macro evolution and micro adaptation

16

3. Changes in animal populations are cyclical rather than linear

17

4. Another reason why evolution is impossible - irreducible complexity

18

In the human cell:

- The human body is made up of trillions of cells
- The body makes millions of cells per second
- Each cell contains 3 billion pairs of genetic bits
- Each cell is irreducibly complex & contains many irreducibly complex sub-systems

19

20

21

22

23

24

5. The speculations of evolutionists are fanciful and mostly counter good science

25

26

Therizinosaurus

Like Big Bird crossed with Count Dracula.

Therizinosaurus was a large, bipedal theropod with squat trunk, a long neck, a tiny head, and a trio of three-foot-long claws on each of its hands. Despite its fearsome appearance (which may or may not have included brightly colored feathers), it is believed to have been a strict vegetarian, or at worst and insectivore.

27

6. Evolutionists have long claimed that
dinosaurs evolved from birds

28

Archaeopteryx

Supposed transitional form of a dinosaur evolving into a bird

29

Problems with reptiles evolving into birds:

1. Cold-blooded creatures evolving into warm-blooded
2. Reptilian versus avian hips
3. Reptilian versus avian lungs
4. Reptilian scales versus bird feathers

30

“Paleontologists have tried to turn *Archaeopteryx* into an earth-bound, feathered dinosaur. But it’s not. It is a bird, a perching bird. And no amount of ‘paleobabble’ is going to change that.”

Alan Feduccia (World authority on birds), *Science*, “Archaeopteryx: Early Bird Catches a Can of Worms”, 1993

31

Archaeopteryx

Turns out to be an extinct type of bird.

32

7. Evolutionists claim that similarities in species is proof that they evolved from one another

33

8. If similar species are not evolved from one another, what accounts for the similarities we see in different species?

34

DNA similarity between humans and apes
is about 90%

35

DNA similarity between humans and apes
is not due to common ancestry

36

DNA similarity between humans and mice
is also about 90%

37

DNA similarity between humans & apes is not due
to common ancestry but to a common designer

38

39

9. There is no missing link in the fossil record

40

The whole chain is missing!

41

10. There are serious flaws in the dating techniques scientists use:

Carbon 14
Potassium Argon

42

Examples of mistakes in dating:

- Sunset Crater, Northern Arizona
Potassium-argon: 200,000+ yrs
Reality: AD 1065
- Lava flows at Mt. Ngaurhoe, New Zealand
Potassium-argon: 275,000 yrs
Reality: 1949, 1954, 1975
- Hualalai basalt, Hawaii
Potassium-argon: 1.4 – 22 million yrs
Reality: AD 1801
- Mt. Etna basalt, Sicily
Potassium-argon: 140,000 – 350,000 yrs
Reality: 1972

43

Rocks that were created since the 1980 eruption of Mount St. Helens dated up to 2.8 million years old

44

Fossilized tree pollen found in shale in Grand Canyon found at the Precambrian level

45

Living Coelacanth fish found – thought to have become extinct 70 million yrs. ago

46

Quercus cerris oak fossil
considered to be ancient

Living specimen

47

48

Laetoli, Tanzania footprints
dated: 3.5 million yrs. old

human ape

49

Toutle River canyon, 1/40th the size of the Grand Canyon, formed in 7 days by St. Helens explosion

50

30 ft. rock strata deposited in a few hours by
St. Helens explosion

51

Fossilized *caturus furcatus* eating smaller fish

52

Petrified hat fossilized in Tazmanian mine
in just 50 years

53

Petrified ham and derby, fossilized by New Zealand
volcano in 1886

54

Ancient Utah Indian petroglyph

55

Figure 1

Dinosaur carving on
Bishop Bell's tomb in
Carlisle, England
carved in 1496 A.D.

56

Un-fossilized dinosaur tissue found in Alaska in 1990

57

Dinosaur blood vessel and blood cells
containing hemoglobin

58

The late Julian Huxley, famous Darwinist:

“The reason we accepted Darwinism even without proof, is because we didn’t want God to interfere with our sexual mores.”

59

“I will praise You, for I am fearfully and wonderfully made; marvelous are your works, and that my soul knows very well.” Ps 149:14

60
